Version 03 - Sep 2015

Most LED lamps should be compatible for LFXHub control via DMX.
Please be advised effects generated by the LFXHub might look different depending on the response time pre-programmed within the LED lamp´s software. We highly recommend to test each effect with the lamp before you use it live.
It would be more than great if you could inform us if you have been using a lamp successfully with the LFXHub not shown in this list. Movie-intercom does not guarantee the operation of an LED lamp with the LFXHub.
