The table shown below contains lamps using the "switched DMX mode". It means a tube is switched on at a certain dim level. Turn switch of lamp to "fixture" mode for DMX control.
E.g. with a 4 Bank ballast tube #1 is on from 12 % dim level, tube #1 and #2 are on from 37% dim level, lamp #1-3: 64 %, all lamps from 84% dim level. For detailed information how to set up the DMX addresses please refer to the corresponding user manual.

compatible fluoros, **switchable** with the LFXHub via DMX:

fixture	manufacturer	mode	perfect for effects of the LFXHub
4 Bank DMX Ballast	KinoFlo	switched DMX	flasher, sequenzer, neon sign FX, ...
VistaBeam 300/600			
Image 85/45			

This compatability list is updated as soon we have further information about compatibel units. Please find the current list on <http://www.movie-inter.com> > Support > Downloads
Do you know another compatible fluoro? Other users will be thankfull for any hint.
Please send us a short [eMail](mailto:info@movie-inter.com) . Thank you.
